

Sprint 10 Retrospective

What did we do?

- Finish show on map for collector
- Building new branded website
- Design Sign-up
- Design Pick-up list

What went well?

Abid: Likes the design review with Maarten and Hicham. It was a relaxing meeting and we also could talk about other topics.

Usman: not present.

Maarten: Maarten is happy that someone else is doing the retro. Maarten can now see how to improve it because he isn't the scrummaster for once.

Riccardo: Likes the meeting on monday about why he took away some members of the meeting, not being involved enough and not responding to being removed from the meeting. Likes that Usman shares some worries he has.

Tommaso: Likes that Usman opened up to Riccardo, and that he could offer some advice. Also that later on they involved him in. Likes the designs and the website. I am happy that he can focus more on other important stuff. The meetings are shorter and only contain the right people. Is happy about the pre meeting Abid, Hicham and Maarten had for the designs.

Francisco: Happy about the logo, font, website and designs. Also that the money is arrived and everyone can be paid. The house to house interview went well and everyone was happy to contribute, the input from the users was very useful for the app. Likes that someone else is doing the retro, instead of only Maarten.

Melina: Nice that everyone used the new brand guidelines.

Hicham: Happy about the meeting with Abid and Maarten. I am glad that everyone always finds time to help each other. I'm happy that everyone was patient with me during the retro, and understanding that it's my first time.

What can we improve?

Abid: The design meeting was very long today. We should have some time constraints.

Usman: not present.

Maarten: We need someone to take the lead in the design meetings, to speed things along. Keep the retro short else it will take too long. Long meeting drain energy

Riccardo: sad that no one asked to join the database meeting after the conversation on monday. Wants outsiders (not Maarten and Riccardo) to give input on the database.

Tommaso: finish a meeting with next steps, what can be improved, get value out of a meeting. Test the smaller meetings. The smaller meeting will be optional but try to get some value out of them for the team. Have people group when designing, so the designs will be optimal to everyone's input and a lot of ideas will already be merged. We can rotate the design group, everyone works with everyone.

Francisco: Make the meetings shorter. Make some decisions beforehand.

Hicham: Have someone that takes the lead when there is a meeting, so there isn't an awkward silence. Have the designs published before so everyone can review before the meeting so it's faster.

Other Remarks

Maarten: Have Riccardo lead next design meetings and how to improve them.
